Sherryse says:

My specialty is distilling complicated neuroscience and child psychology research down to be easily digestible and applicable. I am passionate about bringing evidence-based information into the classroom, making neuroscience accessible to everyone.

My favorite book for teaching is "Make it Stick" by Peter Brown because it makes the science of learning applicable to everyone!

Fun fact: As my "side gig" I'm a youth basketball coach. I love that the neuroscience of learning is applicable to any environment.

I teach a course at the University on the Science of Wellbeing, where we explore the science of what makes people happy.
